

How UniGreenScheme Prevented Waste By Collecting Pharmaceutical Testing Stations for Resale.

UniGreenScheme

The Asset Resale Service For Universities

Hanson Virtual Instruments Dissolution Test Station collected from Keele

UniGreenScheme is an equipment resale service. We collect store and sell surplus equipment and return a share of the profits to the department.

Mark Arrowsmith, Pharmaceutical Sciences Technician at Keele was short on space. He identified three testing systems that were no longer required

These instruments were fully working, and were costly when new. Even though they were old, they seemed far too good for disposal.

Mark contacted Huw Evans, Keele's Environmental Manager, and UniGreenScheme collected the equipment.

The estimated return to the department from resale is £3,000. The testing systems will go on to have second lives in other pharmaceutical facilities.

"I found the experience with UniGreenScheme very easy and very efficient. Within 24 hours of contacting them the items had been collected." - Mark Arrowsmith, Pharmaceutical Sciences Technician.

Dissolution System taking up valuable space in the Pharmacy Department

UniGreenScheme can help you realise the value in your surplus equipment, recoup space and boost your environmental credentials.
